

1

2

More examples

$$\Sigma = \{a, AB, b, 12\}$$

$AB \in \Sigma$ AB is a symbol of the alphabet

Some words over Σ

$a, \underbrace{aAB}_2, \underbrace{ABa}_2, \underbrace{ab12}_3, \underbrace{abAB}_3$

~~$abBA$~~

Example of $\mathcal{U}(\Sigma)$

$$\Sigma = \{a, b\}$$

$$\mathcal{U}(\Sigma) = \{ \underbrace{\lambda}_{\uparrow \Sigma}, \underbrace{a, b}_{\uparrow \Sigma}, aa, ab, ba, bb, aaa, \dots \}$$

↑
included in every Universal Language)

3

More examples

$$\Sigma = \{a, b\}$$

$$x = aba \quad y = bab$$

$$x, y \in \omega(\Sigma)$$

Neutral element

$$x \lambda = x$$

$$\left. \begin{array}{l} xy = ababab \\ yx = bababa \end{array} \right\} \text{Non-Commutative}$$

$$xy, yx \in \omega(\Sigma)$$

$$(xy)z = x(yz) \text{ Associative}$$

$$x^2 = abaaba \quad y^3 = babbbab$$

$$x^{-1} = aba$$

$$z = aab \quad z^{-1} = baa$$

4

$$\omega(\Sigma) = \{ \lambda, a, b, aa, ab, ba, bb, aaa, \dots \}$$

A language

 L_2

$$L_2 = \{ \lambda \}$$

A language L_1

$$L_1 = \{ aa, ba, aaa \}$$

Another language $L_3 = \{ \lambda, a, aa \}$ ALL are SUBSETS OF $\omega(\Sigma)$ ALL are languages OVER Σ

$$\phi \subset \omega(\Sigma) \quad \phi = \{ \}$$

No words

5

Examples of operations with languages

$$L_1 = \{ab, a\} \quad L_2 = \{bbbb, ba\}$$

$$L_1 \cup L_2 = \{ab, a, bbbb, ba\}$$

$$L_1 \cdot L_2 = \{abbbbb, abba, abbbb, abaa\}$$

$$L_1^2 = L_1 \cdot L_1 = \{abab, abaa, aab, aa\}$$

$$L_1^+ = L_1^1 \cup L_1^2 \cup L_1^3 \cup \dots$$

is a language $\rightarrow \Sigma = \{a, b\} \quad \mathcal{W}(\Sigma) = \{\lambda, a, b, aa, ab, ba, bb, \dots\}$

$$\Sigma^1 = \Sigma \quad \Sigma^2 = \{aa, ab, ba, bb\}$$

$$\Sigma^+ = \{a, b\} \cup \{aa, ab, ba, bb\} \cup \dots = \mathcal{W}(\Sigma) - \lambda$$

λ is not a symbol ↑

$$L_1^* = L_1^0 \cup L_1^1 \cup L_1^2 \cup \dots =$$

$$= \lambda \cup \{ab, a\} \cup \{abab, abaa, aab, aa\} \cup \dots$$

$$L_1^* = L^+ \cup \lambda$$

$\Sigma^* = \mathcal{W}(\Sigma)$ \equiv ALL the words over Σ
including λ

$$L_1 = \{\underline{a}b, a\} \quad L_1^{-1} = \{\underline{b}a, a\}$$
